Healthcare Performance & Analytics Dashboard

Executive Project Portfolio Summary | Clinical & Operational Intelligence

DOMAIN	TOOLS USED	DATASET SIZE	FOCUS AREA
Healthcare Analytics	MS Excel, Data Modeling	1,000 Patient Records	Resource & Patient Flow

EXECUTIVE PROJECT OVERVIEW

This project presents an interactive end-to-end Healthcare Management Dashboard engineered in MS Excel to synthesize clinical operations, patient outcome distributions, length of stay (ALOS), and financial provider dynamics. Designed for executive decision-makers, the system transforms raw patient records into dynamic, sliceable visualizations that highlight systemic delivery bottlenecks and operational opportunities.

OVERALL EXECUTIVE DASHBOARD (BASELINE STATE)

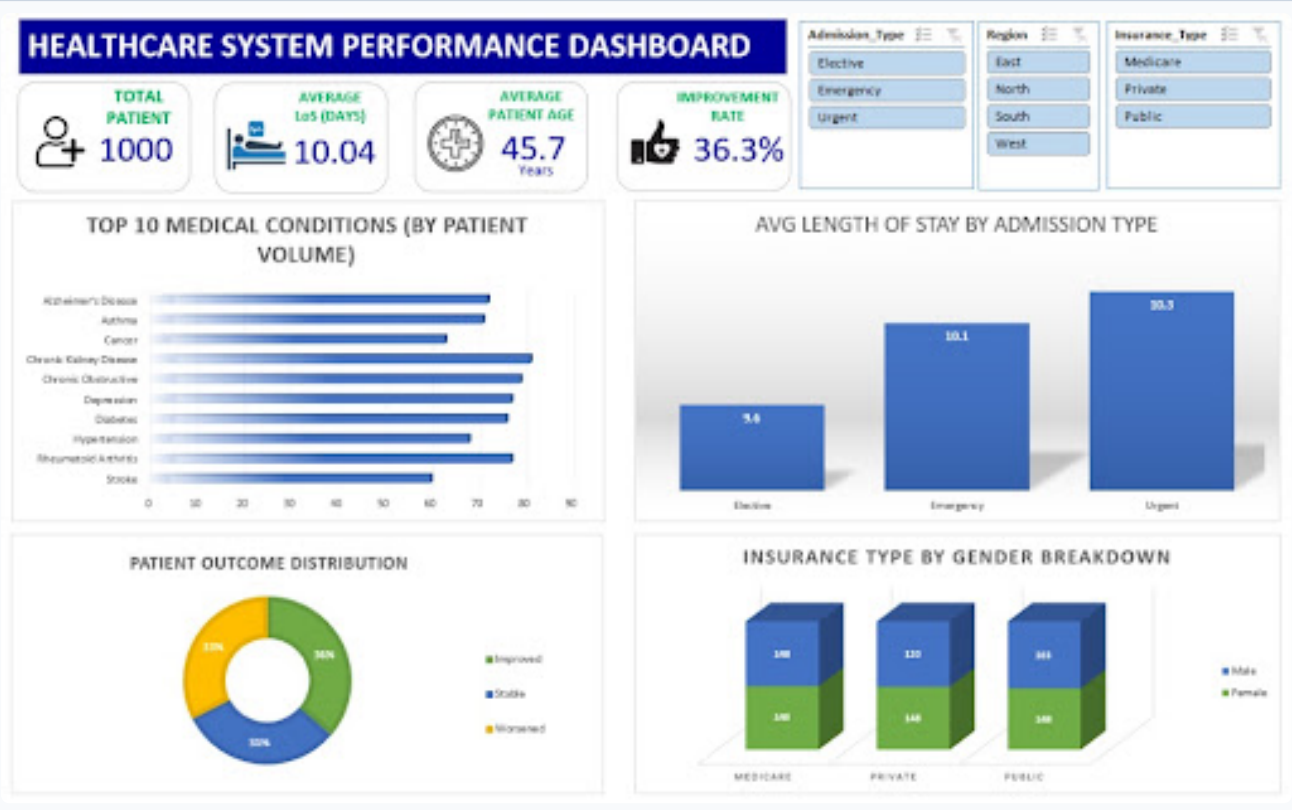

Figure 1.1: Complete Healthcare System Performance Dashboard showing overall system baseline KPIs and regional slices.

TOTAL VOLUME	AVG STAY (ALOS)	AVG PATIENT AGE	IMPROVEMENT RATE
1,000	10.04 Days	45.7 Yrs	36.3%

INTERACTIVE SCENARIO ANALYSIS & CROSS-FILTERING

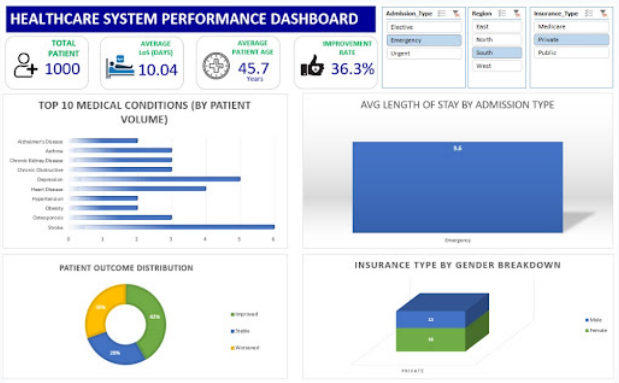

Figure 2.1: Filtered slice for Emergency admissions in the South region (Private Payer).

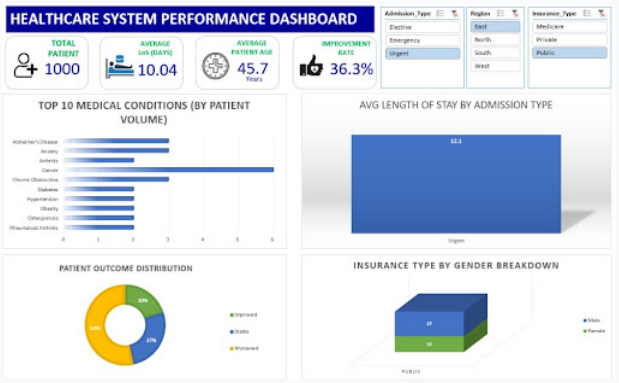

Figure 2.2: Filtered slice for Urgent admissions in the East region (Public Payer).

KEY FINDINGS & OPERATIONAL RECOMMENDATIONS

1. Resource Allocation & ALOS Optimization

- **Urgent Admissions Spike:** Urgent cases demonstrate the highest Average Length of Stay (12.1 days in East region vs 10.04 baseline).
- **Bed Capacity Bottlenecks:** Chronic conditions like Cancer and Depression represent major volume drivers, requiring specialized care pathways.

2. Quality of Care & Payer Dynamics

- **Outcome Variations:** Treatment success rate varies from 36.3% baseline down to 20% in specific high-urgency slices, signaling targeted clinical intervention needs.
- **Balanced Payer Mix:** Patient load is evenly distributed across Medicare, Private, and Public channels with minimal gender disparity.

Resume & Interview Value Proposition

Demonstrates competency in **Data Wrangling**, **Formula Logic (COUNTIF, AVERAGE)**, **Dynamic Excel Modeling**, and **Interactive Data Visualization**. Positioned to prove practical ability in converting raw healthcare datasets into actionable management intelligence.
